OBJECTIVES

This course is designed for cardiologists, internists, primary care physicians, endocrinologists, radiologists, nurse practitioners, and other health care providers. The intended result of this activity is improvements in competence, performance and patient care and at the conclusion of this seminar attendees will be able to:

- Discuss recent guidelines for the care of patients with coronary artery disease, including the use of coronary stents and newer pharmacologic interventions.
- Assess common issues related to pediatric cardiology including children and adults with congenital heart disease, and examine the association between obesity and cardiovascular disease in children.
- State the new appropriateness criteria for the use of cardiac imaging tests
- Apply recent guidelines for evaluation and treatment of lipid disorders.
- Describe the latest developments in interventional cardiology, including advances in interventional procedures for valvular heart disease and for PFO and ASD closure.
